

AASHA FURNITURE

Approval, Risk & Governance Matrix

Controlled test-business document. Aasha Furniture is a synthetic business profile created for Agent Flux end-to-end verification. Product, customer, tax-registration, bank, contact and transaction identifiers in this package are test data and must not be treated as real-world credentials or legal records.

1. Approval matrix

Action/risk	Condition	Required approver
Discount	0–5%	Sales Manager / delegated sales authority
Discount	>5–10%	Sales Manager
Discount	>10–15%	Owner
Discount	>15%	Owner exception
Order value	Up to ■1,00,000	Sales authority
Order value	>■1,00,000–■3,00,000	Manager
Order value	>■3,00,000	Owner
Credit sale	Any non-standard credit	Finance
Refund	Up to ■10,000	Finance
Refund	>■10,000	Owner
Custom manufacturing	Non-standard structural/specification change	Operations
Price override	Any price outside approved rate card	Manager or Owner based on impact

2. Segregation of duties

Requester and approver must be different users for material financial exceptions.

Sales cannot approve its own exception discount.

Finance reconciliation and refund approval must not be performed by the same user when the refund exceeds the delegated threshold.

System administrators should not be able to silently modify financial records without an audit trail.

3. Risk scoring test model

LOW: standard catalogue item, standard price, standard payment terms.

MEDIUM: standard item with elevated discount or non-standard delivery condition.

HIGH: large order, significant discount, credit exception, refund above threshold, unusual price override or other configured high-risk event.

Risk score must be explainable: the workflow should retain the factors that caused the score and the approval requirement.

4. Audit requirements

Every approval request must record requester, approver, entity, reason, risk factors, decision, timestamps and rejection reason where applicable.
